SARVODAY CHARITABLE TRUST
KAKANPUR

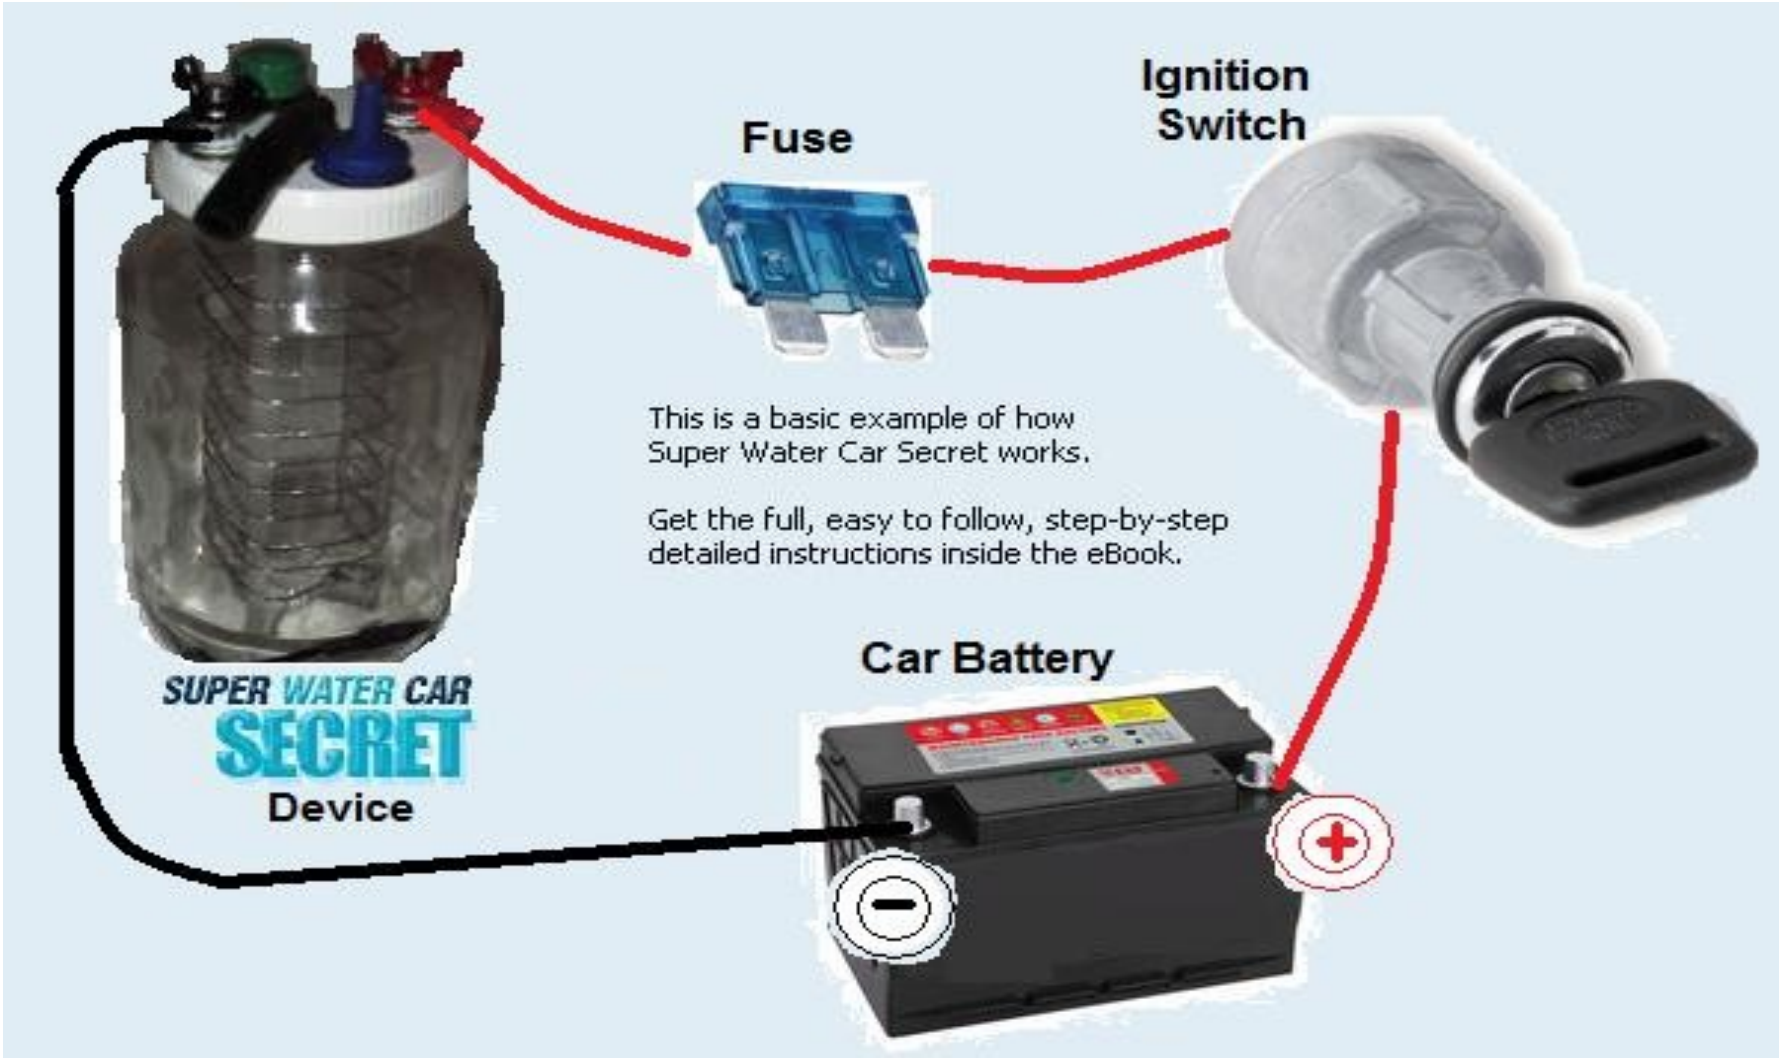

# How Does This Work With My Car?

Using vacuum !"ssu!" #!$m %$u! ca!& '(" ")"c'!$)%*"! s"n+s HHO gas +i!"c')% in'$ '(" "ngin"s in'a," mani#$)+ $! ca!-u!"'$!.

**After you have the vacuum setup done, you need to connect the electrolyzer device to your car's battery via the ignition switch. This setup only uses 1-3 amps and makes sure the device doesn't produce any HHO when the car is off. We also added a fuse in there for added protection.**

# H$ / D$"s T(is W$!, Wi'( 0% Ca!1

# THIS IS THE SAFEST TECHNOLO2Y

# What are some of the benefits to running your car on water?

- **it is done by taking a small amount of electricity from your car, and using this to convert water into a gas called HHO (two hydrogen and one oxygen). HHO is also known as brown's gas, or hydroxy. This is a VERY powerful fuel. It is proven to be up to 3 times as efficient as regular gas... because normally, a lot of energy is wasted on vibration, heat and pollution. it is not possible to make your car run *PURELY* on water. You will need to have both gas and water in your converted car. However, you can still save around 40-60% on gas costs by running your car on water and gas. This represents HUGE savings if you drive your car around a lot, and if gas prices are high in your area.**

- **You also get tons of other benefits other than just saving on gas. Because water is more efficient, you also get more mileage. Many people have made cars that originally get 20-30MPG to now to 40+MPG.**
